With respect to claim 3, Halmosi et al. disclose a grouser shoe wherein the bar has a second end and characterized in that the second end has a second end axis, the second end axis being angled in respect to the center axis to form a second wing (opposite of reference character 52) and the second end axis being differentially angled in respect to the center bar than the end axis.

With respect to claims 4-5 and 16-17, Halmosi et al. disclose a grouser shoe characterized in that the center of the bar has center height 34 in Figure 1, the end of the bar has an end height 50, and the center height 34 being greater than the end height 50 and the two ends have specified lengths, and the specified lengths being different respectively.

6. Claims 39-53 are allowed.
